

DYNASPEED™ SEGMENTED SLOT DIE

The Dynatec Advantage

- **Excellent pattern cut-off**
- **Widths to 210mm (8.25")**
- **Web speeds to 300M/min (1000fpm)**
- **Robust construction for extended life**
- **Applications include windowing, labels & web converting.**
- **Infinite pattern variability**
- **4 millisecond cycle time**
- **8 Independent slot sectors offer ultimate flexibility**
- **Fluid pressures to 600psi, viscosities to 6000cps**
- **Optional bracketry for easy mounting.**

The DynaSpeed™ Slot Dies offer accurate pattern placement with excellent cut-offs for slow or high-speed web applications. It is designed for windowing or other applications where independent control of segments across the slot width is required and/or where excellent pattern cut-off is essential. Easily replaced fluid distribution plates afford a quick means of changing patterns across the width of application. No equipment modifications are required to change pattern lengths.

///TW Dynatec

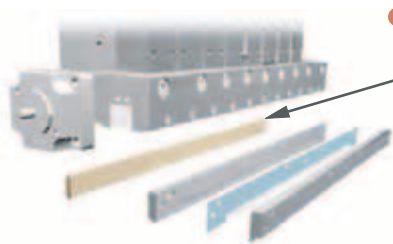

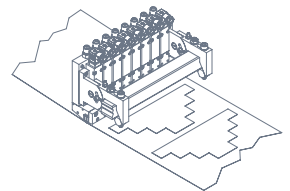

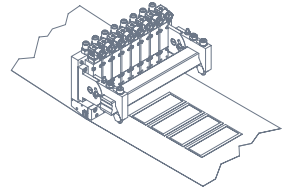

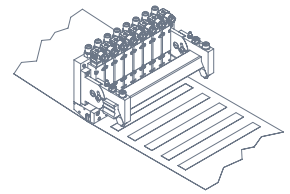

Adhesive Application Solutions

DYNASPEED™ SEGMENTED SLOT DIE

- Each segment can be independently supplied with different glues and application pressures.

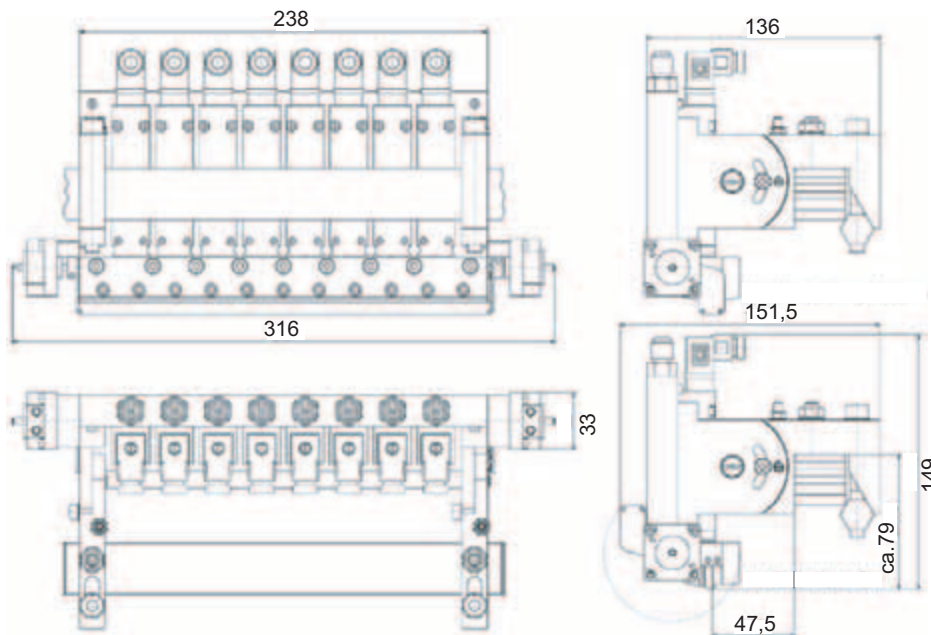

- Independent segments afford the flexibility to achieve a wide range of application patterns.

- Crossweb pattern changes are easily accomplished by simply changing the fluid distribution plate.

- The optional automatic sealing device prevents the glue from drying inside the nozzle during production breaks.

Application width:	210mm max.
Machine speed:	300m/min. max.
Viscosity:	6000mPas max.
